Subject: HOTSITE REPORT: Update - Warehouse Fire in Parkersburg, WV

;

Wood County's fire watch period is expected to end this afternoon. The county's fire suppression contractor continued to cool down hot spots on the property. Particulate data will be updated on the response.epa.gov website. EPA air sampling is planned for tomorrow to determine the air quality now that the fire is out. EPA has amended the sampling locations to target sensitive populations. EPA will also assist local responders with equipment inspections to determine if equipment is contaminated from firefighting activities.

Area schools were reopened yesterday. Air monitoring results indicated the average total particulates were in the "GOOD" range according to the Air Quality Index ranges.

ATSDR and the WV Division of Health and Human Resources have contacted the Wood County Health Department with an offer to perform Assessment Chemical Exposure Surveys. The decision whether or not to accept this offer will be discussed among Wood County Officials and responders.

WVDEP's order to the company requires the owner of the property to notify WVDEP within 10 days that they have secured a cleanup contractor. WVDEP also ordered the company to implement security measures by tomorrow.
